

MANUAL FOR DCT4++ CLIP by Lavarow

www.dct4plus.com

www.gsm24forum.com

CLIP FEATURES

- Can unlock any dct4+ & dct4++ phone in 2-3seconds
- Reset security code
- Clip can be powered using battery cable with 9V battery or directly from computer using mini USB cable
- Clip is fully updateable using USB connection and don't need any special drivers, only Plug & Play!!! This is First in the world feature! (update operation need computer with internet connection and standard mini usb cable)
- Long battery lifetime, using one battery clip can work few hours which give possibility to unlock over 1000 phones !!!
- Every clip coming with 2months free access into www.dct4plus.com unlocking server

POWERING CLIP

BATTERY CONNECTOR OR BATTERY 9V

- Connect battery cable into clip connector
- Connect battery into cable connector
- You will see now clip LED is on with red color
- Wait ~2 seconds
- LED will change color into blue
- Clip is now ready for unlock operations

POWERING CLIP

MINI USB CABLE

- Connect USB A connector of cable into computer
- Connect Mini-B USB connector into clip
- You will see now clip LED is on with red color
- Wait ~2-4 seconds
- LED will change color into blue
- Clip is now ready for unlock operations

UNLOCKING PHONE

- Power On the clip as was mention before
- Connect phone cable into clip connector (RJ45)
- Connect powered On phone into cable
- LED will start to blink with blue color
- After few seconds LED will change color into green, this means operation was sucessfully and phone is unlocked now
- If LED change color into red then repeat operation by disconnecting phone from cable and connect again
- After unlock one phone you can connect next phones without reset the clip, clip will detect new connected phone and start to unlock it automatically

Also are possible other wariants of unlocking as – connecting powered off phone into clip and then powereing on phone, clip will alaso detect new phone and unlock it, also you can have a connected phone when you powering clip, then after power on the clip start to unlock connected phone, try many wariants, this clip is really smart :) and you don't need to follow exactly by this "Unlocking Phone" steps.

UPDATING FIRMWARE

- Visit www.dct4plus.com site and download ClipUpdater executable fil
 - Open ClipUpdater.exe on your computer
 - Connect clip into mini USB cable
 - Windows will detect new hardware and start to installing drivers
 - Disconnect clip from computer
 - Connect again drivers will be installed again
 - Disconnect clip from computer
 - Step 4, 5, 6, 7 need to be maked only when you connect first time clip into USB port, after one time installation you don't need to do this next time.
- Now after you connect clip into computer ClipUpdater will read info from the clip and clip LED will stall with red color, this means clip is in bootloader mode.
- Now you can click "Update" button, update process will take few minutes

Best Regards
DCT4 Team
